I'm excited to start at 9 and then have to head over to Klamath for a family function for 3 nights, (starting midnight Friday). Another reason why I'm starting to freak out is that I got a surprise package from my bf. Not the kind that makes you happy on the inside. What he got me is an xbox 360. I've been wanting one for forever, but no way am I getting one myself. Now all I have to worry about is dying of boredom on Saturday. Oh, and my parents are coming too! I'm really glad I went ahead and decided to move out a week early. In fact, I'm going to pay them the whole week up front instead of a week a month. I'll be sleeping at my boyfriends sister's house during the week and sleeping at my parents house on the weekends. Then I'll be back on my own on July 3. Mentally preparing for the big move has been rather stressful. I'm leaving my job next week and everything just feels so uncertain. I don't know if I'll find a new job, and if I do, I don't know if it'll be the job for me. I don't know if I'll be stuck living with my parents for a year, or for life. I don't know if I'll have to move back to my old house, or if we'll move into a smaller house. Everything is just so unknown. I know 50b96ab0b6

I've been using this webpart for over a year with no issues. Today the website I'm working on began exhibiting no script errors and all jQuery functions stop working. This is in a dev environment, in production there are no problems with the script. I'm having a hard time tracking down the problem because the page works fine otherwise, this is a problem that started today. Most of the errors that show up are for jquery-1.6.1.js and jquery-1.8.2.min.js Any ideas? A: I think you need to be running the latest version of jQuery for a
